Assessment in Geographical Education Theresa Bourke 2022 In recent years there has been increased attention paid to the importance of assessment in Geographical Education, the chosen subject for this book. Assessment is an important tool for collecting information about student learning and for providing timely data to inform key stakeholders including students, teachers, parents and policymakers. To be effective, assessment needs to be valid, reliable and fair. Validity is about ensuring that we assess what we claim we are assessing. Reliability is about measuring performance and understanding in a consistent way. Without validity and reliability, assessment is unlikely to provide equitable opportunities for students to demonstrate what they know and can do. As geography educators it is therefore important that we identify the core concepts and skills in geography that we want students to master. We need a clear understanding of what the progression of learning looks like for each concept and skill so we can develop fit for purpose assessments that track and improve student learning. While there is a substantial literature on evidence-based assessment in secondary school contexts, research exploring best-practice assessment in geography is rare. This is a concern given the distinctive nature of geography and the important role of assessment in the learning process. This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography. The chapters are written by leading researchers in Geographical Education from across the globe. These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia, USA, South Korea, Germany, Switzerland and Singapore. What unifies the work in this book, is that each chapter focuses on a key feature of the discipline of geography, providing scholarly examples of evidence-based practices for assessing student's knowledge and skills.

Wordsearches Adrian Wallwork 2017-12-12 On the train, on the beach, on the sofa ... many people in all parts of the world enjoy doing wordsearches. If you are studying English and want to learn and practise vocabulary related to various topics, then this book is for you! The topics reflect the kinds of everyday conversations that you might have both with native and non-native speakers of English. The topics are also those that are typically tested in English examinations e.g. TOEFL, Cambridge (First Certificate, Advanced), IELTS, and Trinity. Each chapter begins with a list of questions to enable you to have a conversation about a particular topic in various situations: on a social occasion (e.g. a work dinner, a conference lunch, a party); in the classroom during an English lesson; when chatting, either face to face or online; and during an English oral exam. After the list of questions, you will find a Word List associated with the topic and exercises to test your knowledge of less common words. The final aim is then to find the words from the Word List in the related Wordsearch. Easy English! is a series of books to help you learn and revise your English with minimal effort. You can improve your English by: reading texts in English that you might normally read in your own language e.g. jokes, personality tests, lateral thinking games, and wordsearches; doing short exercises to improve specific areas grammar and vocabulary, i.e. the areas that tend to lead to the most mistakes - the aim is just to focus on what you really need rather than overwhelming yourself with a mass of rules, many of which may have no practical daily value. Other books in the Easy English! series include: Wordsearches: Widen Your Vocabulary in English Test Your Personality: Have Fun and Learn Useful Phrases Word games, Riddles and Logic Tests: Tax Your Brain and Boost Your English Top 50 Grammar Mistakes: How to Avoid Them Top 50 Vocabulary Mistakes: How to Avoid Them

Human Geography Peoples and Countries John M. Foote 2015-06-16 Excerpt from Human

Geography Peoples and Countries, Vol. 1 In these primary grades they frequently include well-organized projects from the study of the home, the farm, the community or store, etc. The readers contain stories of Indian and Eskimo life, other selections contain material relating to the products, occupations, industries, and climatic conditions of our own country and foreign lands. With this rich background of information and concrete experience the child is adequately prepared to begin the study of Peoples and Countries. The position taken by many that the fourth grade child is entirely without preparation for the study of geography, and that he must necessarily begin with his immediate surroundings cannot be successfully sustained. Globe and Maps. - A globe is essential in teaching the shape, the relative size and the movements of the earth, and its relation to the sun and moon. No school can afford to be without one. Other equipment should include large colored physical and political wall maps of the United States, the world and each of the continents. Wall outline maps of continents and the blank black roller map are very helpful. Current News. - Current newspapers and magazines are filled with live interesting geographic material related to local, national and foreign questions. Encourage the pupils to read these publications and make contributions to the class. Train them to read publications, to observe the geographic material and report to the class. A typical daily paper of the Middle West recently examined contained in one issue eight articles on the first page, three on the second, two on the third, and a half dozen more scattered through the rest of the paper, every one of which contained geographic material, or required a knowledge of geography to be read intelligently. Every continent was included. Several of the articles would give excellent bases for problem study. Collections. - When studying a country or a large subject, the teacher should encourage the pupils to collect for class use as many specimens or articles relating to the subject as possible. Rocks, soils, minerals, woods, products, and so on may be assembled, put in boxes or bottles, or mounted on cardboard, properly labeled and made ready for teaching purposes. When studying the Indians of the Great North Woods, it stimulates interest to get together and use a collection of Indian relics, beads, arrow-points, basketry, etc. Sources from which such material can be obtained free or at small cost are suggested throughout the Manual. Begin collecting in advance of your needs. Assign to one child or a committee the task of securing and preparing for use the specimens needed for the study of wheat, to another the needs of corn, and so on. Pictures. - Pictures are entitled to special mention. In their several forms they are most valuable aids in teaching geography. They tell interesting stories, they assist in making ideas concrete, they give vivid impressions of distant places and people, they add a touch of reality to the printed page. Direct the attention of the child to the pictures of the text and teach him to read them as you do the printed page. They come from several sources, but most important is the text. They have been carefully chosen to illustrate the subject being taught. While it is highly desirable to use pictures from other sources, it is not likely that they will contribute nearly as much as those accompanying the subject matter of the textbook. Advantage should be taken of the child's natural desire to collect pictures. Make special assignments to individuals or committees for the collecting of pictures on given subjects, as lumber, the New England fisheries, cotton, western irrigation, etc. Pictures from magazines, advertisements, photographs and post cards should be carefully selected, and then classified according to subjects, countries, or industries, and filed i...
