*Unleashing the Second American Century* Joel Kurtzman 2014-02-25 "An optimistic, fact-based look at how four transformational forces-unrivaled manufacturing depth, soaring levels of creativity, massive new energy sources, gigantic amounts of capital available-will propel the U.S. to new economic heights In *Unleashing the Second American Century*, business expert Joel Kurtzman shows conclusively that all the talk about the relative decline of the United States is not only baseless-it's dead wrong. A widely-held misconception is that "America doesn't make things anymore." But the U.S is by far the world's dominant manufacturing power, and most of what we make is recession-proof. America also has a stunning level of talent and creativity in the world's fastest-growing economic sectors, such as biotech, pharmaceutical, computer hardware and software, and telecommunications. Due to shale and gas, America has the world's largest energy reserves, and is more favorably endowed than even the Middle East. Finally, America has an unprecedented amount of capital now idle—approximately \$4.4 trillion, a sum that is about \$1 trillion larger than the German economy, the world's fourth largest. As Kurtzman shows, when the business community fully grasps the opportunities in the U.S., prosperity will return—and much faster than we now think possible"---

**OECD Economic Surveys: South Africa 2013** OECD 2013-03-04 OECD's 2013 Economic Survey of South Africa examines recent economic developments, policies and prospects. Special chapters cover improving education quality and green growth. *State-permeated Capitalism in Large Emerging Economies* Andreas Nölke 2019-08-30 This book systematically analyzes the economic dynamics of large emerging economies from an extended Comparative Capitalisms perspective. Coining the phrase 'state-permeated capitalism', the authors shift the focus of research from economic policy alone, towards the real world of corporate and state behaviour. On the basis of four empirical case studies (Brazil, India, China, South Africa), the main drivers for robust economic growth in these countries from the 2000s until the 2010s are revealed. These are found, in particular, in mutual institutional compatibilities of 'state-permeated capitalism', in their large domestic markets, and beneficial global economic constellations. Differences in their institutional arrangements are explored to explain why China and India have been more economically successful than Brazil and South Africa. The authors highlight substantial challenges for the stability of state-permeated capitalism and assess the potential future growth, sustainability and likely pitfalls for these large emerging economies. Opening further avenues for empirical and theoretical research, this book raises questions for the future of the global economic order and should appeal to academics, graduate students and advanced undergraduates in politics, economics, economic sociology and development studies. It should also prove a worthwhile and provocative read for development practitioners and policy-makers.

*The Second Machine Age: Work, Progress, and Prosperity in a Time of Brilliant Technologies* Erik Brynjolfsson 2014-01-20 A New York Times Bestseller. A "fascinating" (Thomas L. Friedman, New York Times) look at how digital technology is transforming our work and our lives. In recent years, Google's autonomous cars have logged thousands of miles on American highways and IBM's Watson trounced the best human Jeopardy! players. Digital technologies—with hardware, software, and networks at their core—will in the near future diagnose diseases more accurately than doctors can, apply enormous data sets to transform retailing, and accomplish many tasks once considered uniquely human. In *The Second Machine Age* MIT's Erik Brynjolfsson and Andrew McAfee—two thinkers at the forefront of their field—reveal the forces driving the reinvention of our lives and our economy. As the full impact of digital technologies is felt, we will realize immense bounty in the form of dazzling personal technology, advanced infrastructure, and near-boundless access to the cultural items that enrich our lives. Amid this bounty will also be wrenching change. Professions of all kinds—from lawyers to truck drivers—will be forever upended. Companies will be forced to transform or die. Recent economic indicators reflect this shift: fewer people are working, and wages are falling even as productivity and profits soar. Drawing on years of research and up-to-the-minute trends, Brynjolfsson and McAfee identify the best strategies for survival and offer a new path to prosperity. These include revamping education so that it prepares people for the next economy instead of the last one, designing new collaborations that pair brute processing power with human ingenuity, and embracing policies that make sense in a radically transformed landscape. A fundamentally optimistic book, *The Second Machine Age* alters how we think about issues of technological, societal, and economic progress.

**The Political Economy and Media Coverage of the European Economic Crisis** Julien Mercille 2014-08-27 The European economic crisis has been ongoing since 2008 and while austerity has spread over the continent, it has failed to revive economies. The media have played an important ideological role in presenting the policies of economic and political elites in a favourable light, even if the latter's aim has been to shift the burden of adjustment onto citizens. This book explains how and why, using a critical political economic perspective and focusing on the case of Ireland. Throughout, Ireland is compared with contemporary and historical examples to contextualise the arguments made. The book covers the housing bubble that led to the crash, the rescue of financial institutions by the state, the role of the European institutions and the International Monetary Fund, austerity, and the possibility of leaving the eurozone for Europe's peripheral countries. Through a systematic analysis of Ireland's main newspapers, it is argued that the media

reflect elite views and interests and downplay alternative policies that could lead to more progressive responses to the crisis.

**In Pursuit of World-Class Universities** Marcelo Rabossi 2018-03-10 The pursuit to construct "world-class" universities is an ongoing global obsession across the world, which lays emphasis on the development of competitive higher education and research systems as core national economic approach. The portrayal "world-class" is more contextual rather than absolute, the expression "world-class university" has an irrefutable cachet. There is no solo, clear-cut definition of what organises a world-class university (WCU), but there are few common attributes that majority of the experts point towards. The three attributes stated by Philip Altbach and Jamil Salmi that focus on a high concentration of talent, abundant resources and favourable governance have been widely discussed in writings and practice. Both in developing and developed countries, policymakers and higher education leaders are attempting to identify and outline their desires and plans aimed at achieving global ranking for their university/universities. Despite condemnation of the methodology, the choice of indicators and weightings, and the reliability and quality of data used for comparing performance, the obsession for constructing world-class universities has increased over the period of time. But how much do we really discern or comprehend regarding the ranking systems? What do the rankings really measure? Do rankings measure the quality and help in attaining the broad assignment of higher education? Does the competition as outcome of ranking raise standards? Is the ranking system an apposite instrument to frame higher education policies? This edited volume tries to look at the concept of world-class universities in milieu of different countries of the world and explore their experiences either in existing WCUs or constructing WCU or attempting to create WCU. The country-based chapters show differentiated paths of achievements and their approach towards the concept of WCU.

**Students of Color and the Achievement Gap** Richard R. Valencia 2015-03-05 Students of Color and the Achievement Gap is a comprehensive, landmark analysis of an incontrovertible racialized reality in U.S. K-12 public education---the relentless achievement gap between low-socioeconomic students of color and their economically advantaged White counterparts. Award winning author and scholar Richard Valencia provides an authoritative and systemic treatment of the achievement gap, focusing on Black and Latino/Latina students. He examines the societal and educational factors that help to create and maintain the achievement gap by drawing from critical race theory, an asset-based perspective and a systemic inequality approach. By showing how racialized opportunity structures in society and schools ultimately result in racialized patterns of academic achievement in schools, Valencia shows how the various indicators of the achievement gap are actually symptoms of the societal and school quality gaps. Following each of these concerns, Valencia provides a number of reform suggestions that can lead to systemic transformations of K-12 education. Students of Color and the Achievement Gap makes a persuasive and well documented case that school success for students of color, and the empowerment of their parents, can only be fully understood and realized when contextualized within broader political, economic, and cultural frameworks.

**Cracking the Emerging Markets Enigma** G. Andrew Karolyi 2015 In *Cracking the Emerging Markets Enigma*, emerging markets expert Andrew Karolyi outlines a practical strategy for evaluating the opportunities and—more importantly—the risks of investing in emerging markets. Karolyi's proposed system evaluates multiple dimensions of the potential risks faced by prospective investors. These categories of risk reflect the uneven quality or fragility of the various institutions designed to assure integrity in capital markets—political stability, corporate opacity, limits placed on foreign investors, and more. By distilling these analyses into a numerical scoring system, Karolyi has devised a way to assess with ease emerging markets by different dimensions of risk and across all dimensions together.

**Class Size** Peter Blatchford 2016-04-28 Much debate, research and commentary about class sizes in schools is limited because of an exclusive concern with class size and pupil academic attainment, and a neglect of classroom processes, which might help explain class size effects (or lack of them). Very little is known about the central question: how can teachers make the most of class size changes? Much of the commentary on class size effects has focused on Western and English-speaking countries but there are promising developments elsewhere, particularly the 'Small Class Teaching' initiatives in East Asia in the past decade, which have brought new knowledge and practical wisdom to the class size debate. This book seeks to move toward a clearer view of what we know and do not know about class size effects, and to identify future steps in terms of policy and research. There is a huge and exciting potential for international collaboration on knowledge concerning class size effects which can help with research-informed policy. The book aims to draw out Eastern and Western international contexts which underpin any understanding of the role of class size in school learning. The book has chapters by an international team of experts on class size effects, including Maurice Galton and John Hattie. Chapters are organised into four main sections: Socio-cultural and political contexts to the class size debate in the East and West; Research evidence on class size; Class size and classroom processes likely to be related to class size changes; Professional development for small class teaching in East Asia.

**IAS Prelims Magic 2013 (Paper 1)** *Collective Redress and EU Competition Law* Eda Şahin 2018-12-13 Exploring obstacles to effective compensation of victims of competition infringements, this book categorises the types of victims harmed and the types of losses arisen from these infringements to identify to what extent there is a need for enhanced private competition law enforcement in the European Union (EU) and the best way to address this need. It shows that there is a genuine need for facilitating consumer damages actions and that consumer claims are the only claims that can be pursued in a collective redress action. In order to compensate consumers and overcome barriers to effective enforcement of their right to damages, it structures a collective redress action for consumers by considering the following elements: i. the formation of the group, ii. the type of representative party iii. funding mechanisms and iv. calculation and distribution of damages.

**Minerals Yearbook 2007** Routledge Handbook of Social and Sustainable Finance Othmar M. Lehner 2016-06-23 *Routledge Handbook of Social and Sustainable Finance* brings together an international cast of leading authorities to map out and display the disparate voices, traditions and professional communities engaged in social finance activity. With a clear societal or

environmental mission, foundations, individual and group investors, as well as public bodies around the world have become increasingly eager to finance and support innovative forms of doing business. Together, founders and established businesses alike are embracing new sustainable business models with a distinct stakeholder approach to tackle social or environmental problems in what they see as a failed economic system in crisis. As a result, the topic of social and sustainable finance is at the forefront of financial economic thought. This Handbook is divided up into three parts. The first, "The Landscape of Social and Sustainable Finance and Investments", comprises of chapters from a multitude of perspectives in an effort to grasp the entirety of the landscape. The second, "Challenges, Suggestions, Critiques and Debates", focuses on areas ranging from sociological underpinnings to critical takes on markets, and the identification of specialized business models. Amongst ethical considerations, topics include the scaling of impact, an analysis of sustainability as risk prevention and comparative analyses of various methods of justification and measurement. In the third and final section, "Markets and Institutions", contributions range from various perspectives on sustainable banking to environmental marketplaces, and finally on to practical cases and country specific observations. This volume is essential reading for both academics and students in economics and finance. It is also of interest to those who study environmental economics, microeconomics and banking.

**Excellence Gaps in Education** Jonathan A. Plucker 2020-01-15 In Excellence Gaps in Education, Jonathan A. Plucker and Scott J. Peters shine a spotlight on "excellence gaps"—the achievement gaps among subgroups of students performing at the highest levels of achievement. Much of the focus of recent education reform has been on closing gaps in achievement between students from different racial, ethnic, or socioeconomic backgrounds by bringing all students up to minimum levels of proficiency. Yet issues related to excellence gaps have been largely absent from discussions about how to improve our schools and communities. Plucker and Peters argue that these significant gaps reflect the existence of a persistent talent underclass in the United States among African American, Hispanic, Native American, and poor students, resulting in an incalculable loss of potential among our fastest growing populations. Drawing on the latest research and a wide range of national and international data, the authors outline the scope of the problem and make the case that excellence gaps should be targeted for elimination. They identify promising interventions for talent development already underway in schools and provide a detailed review of potential strategies, including universal screening, flexible grouping, targeted programs, and psychosocial interventions. Excellence Gaps in Education has the potential for changing our national conversation about equity and excellence and bringing fresh attention to the needs of high-potential students from underrepresented backgrounds.

**The Future, Declassified** Mathew Burrows 2014-09-09 Twenty-five years ago when Mathew Burrows went to work for the CIA as an intelligence analyst, the world seemed frozen. Then came the fall of the Berlin Wall and the implosion of the Soviet Union; suddenly, unpredictability became a universal theme and foresight was critical. For the past decade, Burrows has overseen the creation of the Global Trends report—the key futurist guide for the White House, Departments of State and Defense, and Homeland Security. Global Trends has a history of making bold predictions and being right: \* In 2004, it argued that al-Qaeda's centralized operations would dissolve and be replaced by groups, cells, and individuals—the very model of the 2012 Boston bombings. \* In 2008, it included a scenario dubbed October Surprise, imagining a devastating late-season hurricane hitting an unprepared New York City. In *The Future, Declassified*, Burrows—for the first time—has expanded the most recent Global Trends report into a full-length narrative, forecasting the tectonic shifts that will drive us to 2030. A staggering amount of wholesale change is happening—from unprecedented and widespread aging to rampant urbanization and growth in a global middle class to an eastward shift in economic power and a growing number of disruptive technologies. Even our physical geography is changing as sea levels rise and faster commercial shipping routes open up through a warming Arctic region. The book concludes with its most provocative section: four fictional paths to 2030 with imagined storylines and characters based on analysis by the most authoritative figures in the intelligence community. As Burrows argues, we are living through some of the greatest and most momentous developments in history. Either we take charge and direct those or we are at their mercy. The stakes are particularly high for America's standing in the world and for ordinary Americans who want to maintain their quality of life. Running the gamut from scary to reassuring, this riveting book is essential reading.

**Playing with Fire** Yilmaz Akyüz 2017-06-30 Starting in the early 1990s many emerging and developing economies (EDEs) liberalized their capital accounts, allowing greater freedom for international lenders and investors to enter their markets as well as for their residents to borrow and invest in international financial markets. Despite recurrent crises, liberalization has continued and in fact accelerated in the new millennium. Integration has been greatly facilitated by progressively looser monetary policy in the United States, notably the policies that culminated in debt crises in the United States and Europe and the ultra-easy monetary policy adopted in response. Not only have their traditional cross-border linkages been deepened and external balance sheets expanded rapidly, but also foreign presence in their domestic financial markets and the presence of their nationals in foreign markets have reached unprecedented levels. As a result new channels have emerged for the transmission of financial shocks from global boom-bust cycles. Almost all EDEs are now vulnerable irrespective of their balance-of-payments, external debt, net foreign assets and international reserve positions although these play an important role in the way such shocks could impinge on them. This is a matter for concern since the multilateral system still lacks mechanisms for orderly resolution of financial crises with international dimensions. *Playing with Fire* provides an empirical account of deeper integration of EDEs into the global financial system and discusses its implications for stability and growth, focusing on the role of policies in the new millennium in both EDEs and the United States and Europe.

**Inequalities in the UK** David Fée 2017-11-17 This book addresses the question of the extent of and responses to inequalities in the UK in 2017 in the wake of the 2008 Great Recession and provides an up-to-date account of the distribution of inequalities, the evolving ways they are measured/addressed as well as the changing perception of inequalities by the general public and policy-makers.

**Building an Opportunity Society** Lewis D. Solomon 2017-09-08 Twenty-first-century US policymakers face a great challenge: How can federal government help more people achieve the American dream? Specifically, how can we provide greater opportunities for less-prosperous individuals, enabling them to succeed through hard work, on their merits, and take increased responsibility for their lives? Lewis D. Solomon sees this as the challenge of our time. He seeks to thread the fine public policy needle between social democratic efforts to perfect the world and those who negatively view public sector programs. Based on the premise that capitalism is not inherently unjust and defective, and American capitalism's structural features do not inexorably thwart opportunity, Building an Opportunity Society offers the possibility of more limited, carefully structured, cost-effective, empirically verified federal policies and programs. Solomon first provides the background and context of many existing domestic challenges and problems that the current and proposed federal policies and programs seek to address. He then analyses the federal safety net that keeps Americans from poverty and helps reduce income inequality. Finally, he presents a lifecycle analysis of current federal policies and programs, preventive and remedial, designed as part of the Entitlement State, but if restructured could facilitate the building of an Opportunity Society. Solomon challenges policymakers to take a fresh look at how best to achieve society's goals for all citizens.

**Consumer Involvement in Private EU Competition Law Enforcement** Maria Ioannidou 2015-09-03 Despite the growing importance of 'consumer welfare' in EU competition law debates, there remains a significant disconnect between rhetoric and reality, as consumers and their interests still play only an ancillary role in this area of law. Consumer Involvement in Private EU Competition Law Enforcement is the first monograph to exclusively address this highly topical and much

debated subject, providing a timely and wide-ranging examination of the need for more active consumer participation in competition law. Written by an expert in the field, it sets out a comprehensive framework of policy implications and arguments for greater involvement, positioning the debate in the context of a broader EU law perspective. It outlines pragmatic approaches to remedial and procedural measures that would enable consumer empowerment. Finally, the book identifies key institutional and political obstacles to the adoption of effective measures, and suggests alternative routes to enhance the role of consumers in private competition law enforcement. The book's innovative approach, combining normative analysis and practical solutions, make it invaluable for academics, policy-makers, and practitioners in the field.

**Capitalism's Crises** Vishwas Satgar 2015-10-01 The contributors to this volume draw on a non-dogmatic Marxist approach to explain the systemic and conjunctural dynamics of crisis inherent in global capitalism. Their analysis asks what is historically specific to capitalism's crises while avoiding catastrophic or defeatist claims. At the same time the volume situates left agency within actual patterns of resistance and class struggle to clarify the potential for transformative change. The cycle of resistance strengthened by the World Social Forum and transnational activism is now punctuated by the experience of the Arab Spring, the agency of anti-systemic movements, left think tanks, the Occupy Wall Street Movement, labour unions, left parties in Europe such as Syriza and Podemos and peoples' budgeting in Kerala, India. On the down side, we are witnessing the waning of the Workers Party in Brazil and serious challenges for South Africa's once powerful labour movement and still formative social justice activism. All these developments are assessed in this volume. This is the second volume in the Democratic Marxism series. It elaborates on crucial themes introduced in the first volume, Marxism in the 21st Century: Crisis, Critique and Struggle (edited by Michelle Williams and Vishwas Satgar).

**The Rise of Africa's Middle Class** Henning Melber 2016-12-15 Across Africa, a burgeoning middle class has become the poster child for the 'Africa rising' narrative. Ambitious, aspirational and increasingly affluent, this group is said to embody the values and hopes of the new Africa, with international bodies ranging from the United Nations Development Programme to the World Bank regarding them as important agents of both economic development and democratic change. This narrative, however, obscures the complex and often ambiguous role that this group actually plays in African societies.

Bringing together economists, political scientists, anthropologists and development experts, and spanning a variety of case studies from across the continent, this collection provides a much-needed corrective to the received wisdom within development circles, and provides a fresh perspective on social transformations in contemporary Africa.

**The Rise of the Robots** Martin Ford 2015-09-03 Intelligent algorithms are already well on their way to making white collar jobs obsolete: travel agents, data-analysts, and paralegals are currently in the firing line. In the near future, doctors, taxi-drivers and ironically even computer programmers are poised to be replaced by 'robots'. Without a radical reassessment of our economic and political structures, we risk the very implosion of the capitalist economy itself. In *The Rise of the Robots*, technology expert Martin Ford systematically outlines the achievements of artificial intelligence and uses a wealth of economic data to illustrate the terrifying societal implications. From health and education to finance and technology, his warning is stark - all jobs that are on some level routine are likely to eventually be automated, resulting in the death of traditional careers and a hollowed-out middle class. The robots are coming and we have to decide - now - whether the future will bring prosperity or catastrophe.

Despite the founders' declaration that "all men are created equal," the reality of life in America has continuously told a different story. With careful research, Isenberg reviews the popular American myth of equality for all and illustrates how poor whites, or "white trash," have traditionally been a much-derided, marginalized part of American society. Class hierarchy traces back to America's earliest history. Contrary to the myth that American colonial settlers were either enterprising businessmen or devout Christians fleeing religious persecution, the majority were actually economically challenged outcasts or social burdens that the English were happy to be rid of. Many were criminals, vagrants, and orphans who then became indentured servants with no landowning rights. Thus, from...
