Theory and Practice of Computation Shin-ya Nishizaki 2019-09-20 This volume contains the papers presented at the 8th Workshop on Computing: Theory and Practice, WCTP 2018 and is devoted to theoretical and practical approaches to computation. The conference was organized by four top universities in Japan and the Philippines: the Tokyo Institute of Technology, Osaka University, the University of the Philippines Diliman, and De La Salle University. The proceedings provide a broad view of the recent developments in computer science research in Asia, with an emphasis on Japan and the Philippines. The papers focus on both theoretical and practical aspects of computations, such as programming language theory, modeling of software systems, empathic computing, and various applications of information technology. The book will be of interest to academic and industrial researchers interested in recent developments in computer science research.

Foreign Direct Investment in Central and Eastern Europe Svetla Trifonova Marinova 2018-01-12 This title was first published in 2003. Covering a diverse range of countries such as Bulgaria, the Czech Republic, Hungary, Poland, Slovakia, Slovenia and Russia, as well as referring to the characteristics of the region as a whole, this book examines the inflow and outflow of foreign direct investment from both home and host company and country perspectives.

By analyzing foreign direct investment in terms of process, content and context, the book provides a holist approach towards direct foreign investment in the transitional context of Central and Eastern Europe, embracing both macro- and micro-economic perspectives of the process.

Globalisation and Advertising in Emerging Economies Lynne Ciochetto 2013-10-11 Brazil, Russia, India and China are four of the largest and most dynamic contemporary emerging economies in the world. Strong economic growth in each of these economies has been accompanied by the expansion of the advertising and consumer goods sectors. Using a series of country studies, this book explores the dynamics of global capitalism from the perspective of global advertising. The book highlights the on-going expansion of advertising and consumerism against the wider socio-economic, political and cultural contexts. It provides fresh insights about contemporary global priorities, and argues that advertising plays a key role linking culture and the economy. By presenting individual case studies of advertising campaigns, it offers examples of the globalisation of specific brands. Environmental implications of the expansion of advertising and its role in stimulating consumerism are explored in the context of the four emerging economies. The book compares and contrasts the individual country profiles, and makes an assessment of the validity of the argument regarding their projected importance and the likelihood of their future dominance of the global economy.

World Scientific Reference On Globalisation In Eurasia And The Pacific Rim (In 4 Volumes) 2015-11-06 This multi-volume set focuses on a key region of the world which contains four of the biggest emerging economies, a large number of highly dynamic small- and medium-sized emerging economies, and one of the leading advanced industrial countries. It is a region which contains some of the biggest hydrocarbon and mineral deposits in the world, and some of the most energy- and metal-hungry economies in the world. With half the world's population, it is one of the most dynamic regions of the globe in terms of population movement, providing a key focus of foreign investment, both inwards and outwards, with a high degree of technological dynamism. The region plays a central role in the industrial supply networks of the globe.In four volumes, focusing on, respectively, foreign investment, innovation, energy and migration, the set focuses on each of the main elements in the production system in turn – capital, innovation, raw materials and labour. Volume 1 studies patterns of interchange of financial and direct investment within the region, focusing on governance, the development of supply chains, and technology transfer. In Volume 2, the technology theme becomes dominant, with a special focus on digital technology. It includes technical issues like mobile communications standardisation, developmental dimensions, including the role of clusters and science parks, and political economy issues like the rise of techno-nationalism. Volume 3 turns to energy issues – not just issues of supply and demand, but also key problems of climate change, security and sustainability across the Eurasian and Asian landmass. Volume 4 presents the human dimension, looking at people in movement, as workers, citizens, men, women, or colonisers. Among the key issues discussed are the migration from country to town in China, the 'greying' of countries like Japan, the effect of war on migration, marriage migration, human trafficking and the depopulation of the Russian Far East.The set is a must-have for anyone keen to understand the region whose manufacturing core can be described, without exaggeration, as the ‘workshop of the world’ of the twenty-first century.

World Regional Geography (without Subregions) Lydia Mihelic Pulsipher 2005-03-18 More than any other text for the course, Pulsipher’s World Regional Geography (WRG) shows students how individuals are affected by, and respond to, economic, social, and political forces at all levels of scale: global, regional, subregional, local. It offers a vivid and inclusive picture of people in a globalizing world—men, women, children, both mainstream and marginalized citizens—not as seen from a Western perspective, but as they see themselves. The core topics of physical, economic, cultural, and political geography are examined from a contemporary perspective, based on authoritative insights from the most recent geographic theory. The Abe Restoration Craig Mark 2016-05-12 Shinzo Abe returned to office as Prime Minister of Japan 2012, leading the Liberal Democratic Party (LDP) for a second time. This book examines how Abe has sought a restoration of Japanese primacy at three levels: political, through the restoration of the traditional postwar parliamentary dominance of the LDP; economic, through his signature policy known as “Abenomics,” which aims to restore Japan’s economic prosperity and end decades-long deflationary stagnation; and strategic, in which Abe wishes to restore Japan to a prominent role in regional and international security by reinterpreting and potentially altering or even abolishing Article 9 of the constitution, which would allow greater deployment of the Japanese Self-Defense Forces. This study argues that Abe has achieved overall political dominance, being re-elected in 2014, and has passed controversial legislation allowing Japan to exercise collective self-defense, but it also contends that Abenomics has yet to lift the country out of its long-running deflationary stagnation.

The Biometric Industry Report - Forecasts and Analysis to 2006 M Lockie 2012-12-02 Biometrics - the physiological and/or behavioural characteristics that can be used to verify the identity of an individual - are no longer just being used in high security locations; they are now in use in major, mainstream government and commercial applications. Since September 11, the heightened awareness of security issues is driving forward the adoption of biometrics within numerous application environments. Coupled with a dramatic decrease in the price of such systems and the formulation of comprehensive industry standards, the market looks set for rapid growth over the next 5 years. The second edition of The Biometric Industry Report - Forecasts and Analysis to 2006 examines the current use and future growth of biometrics. It analyses the trends in markets, technologies and industry structure and profiles the major players. The report provides key market statistics and forecasts essential for companies to plot their future growth strategies. Europe and the Japanese Challenge Assistant Professor School of Management and Organization Mark Mason 1997 Japanese foreign direct investment surged into Western markets in the late 1980s provoking intense policy debates in Europe and America. How did the European authorities respond to this 'Japanese Challenge'? How did their response compare to the US policy record? Does this internationalbusiness activity give any insights into the idea of increasing convergence of behaviour of the world's capitalist economies?To answer these questions, Mark Mason investigates European policies towards the Japanese Challenge in cross-national and historical perspectives. He compares the policy response of European governments with that of the US government by contrasting case studies in three key sectorsthe automobileindustry, consumer electronics, and banking. The case studies are then examined in the context of wider policy patterns and models across the entire Triad throughout the postwar period.This book will be essential reading for anyone interested in international business history, Japanese investment policies, international trade, corporate strategy, and government-industry relations.

The Evolution of Economies Patrick Spread 2015-12-22 It is clear even to casual observation that economies evolve from year to year and over centuries. Yet mainstream economic theory assumes that economies always move towards equilibrium. One consequence of this is that mainstream theory is unable to deal with economic history. The Evolution of Economies provides a clear account of how economies evolve under a process of support-bargaining and money-bargaining. Both support-bargaining and money-bargaining are situation-related - people determine their interests and actions by reference to their present circumstances. This gives the bargaining system a natural evolutionary dynamic. Societies evolve from situation to situation. Historical change follows this evolutionary course. A central chapter of the book applies the new theory in a re-evaluation of the industrial revolution in Britain, showing how specialist money-bargaining agencies, in the form of companies, evolved profitable formats and displaced landowners as the leading sources of employment and economic necessities. Companies took advantage of the evolution of technology to establish effective formats. The book also seeks to establish how it came about that a ‘mainstream’ theory was developed that is so wildly at odds with the observable features of economic history and economic exchange. Theory-making is described as a process of ‘intellectual support-bargaining’ in which theory is shaped to the interests of its makers. The work of major classical and neoclassical economists is contested as incompatible with the idea of an evolving money-bargaining system. The book reviews attempts to derive an evolutionary economic theory from Darwin’s theory of evolution by natural selection. Neoclassical economic theory has had enormous influence on the governance of societies, principally through its theoretical endorsement of the benefits of ‘free markets’. An evolutionary account of economic processes should change the basis of debate. The theory presented here will be of interest immediately to all economists, whether evolutionary, heterodox or neoclassical. It will facilitate the work of economic historians, who complain that current theory gives no guidance for their historical investigations. Beyond the confines of professional theory-making, many will find it a revelatory response to questions that have hitherto gone unanswered.

The International Handbook on Environmental Technology Management Dora Marinova 2008-01-01 This is an excellent textbook, suitable as a core text for environmental engineers and environmental scientists but equally it should, in my opinion, be compulsory reading for all researchers, practitioners, and policy-makers regardless of their discipline because it has relevance for all. In fact, the book is so lively and understandable that everyone and anyone could and should read it. . . Clearly written by a team of recognised environmental authors drawn from around the world, it guides the reader through current thinking on the tools and techniques industry. . . As an academic, it is a delight to find a book to recommend that I know students will enjoy and one which addresses so many different elements of a diversity of university courses, while covering the most important areas of environmental technology and management. I am certainly using it to enhance and update the content of some of my own lectures. Susan Haile, International Journal of Sustainable Engineering This substantial collection draws together a very wide variety of literatures and practices. . . I would expect this book to be a popular purchase by academic libraries, principally as a core text. R&D Management This stunning Handbook is an excellent tool for environmental manager and environmental officer alike. It is brimful of ideas, case studies and methodologies which stimulate continuous improvement thinking and help train staff to implement sustainability and environmental management concepts. Highly recommended. Eagle Bulletin This important Handbook is the first comprehensive account that brings together recent developments in the three related fields of environmental technology, environmental management and technology management. With contributions from more than 55 outstanding authors representing ten countries and five continents, the reader is provided with a vast range of insightful perspectives on the latest industry and policy issues. With the aid of numerous case studies, leading experts reflect on significant changes in the use of technology and management practices witnessed in the last decade. Within this Handbook,

the authors discuss, in detail: eco-modernization and technology transformation environmental technology management in business practices measuring environmental technology management case studies in new technologies for

the environment environmental technology management and the future. The International Handbook on Environmental Technology Management has a broad audience including researchers, practitioners, policymakers and students in the fields of sustainability and environmental science.
